Can you add search?

Favourite button does not work

Image in welcome section has a blurred circle in front of the serum

There is an overlap with the banner in welcome section and the text boxes below the shop now button, maybe the buttons could shift up a bit or the banner shift a bit lower.

Quiz doesn't pick right products

Made random selections and told it looking for soap but no soap was in the results, maybe because they are out of stock. It also added the glow reset scrub to the cart 2 times plus a body care bundle even though i selected mostly face care.

Redid with the following responses

Step 1 - reduce acne breakouts

Step 2 - oily

Step 3 - not sensitive

Step 4 - mostly face care

Step 5 - quick and simple

Step 6 - no preference

Results were - soap saver mesh bag - cleanse

Skinfidence Blemish Cream- treat

Coffee rush scrub - moisturize

Total \$ 4550

Product selection needs refinement or is it based on what's selected in the backend?

Home page

Is it possible to remove the preview of the descriptions from the products and just leave Name, review stars, price and add to cart on hover? Could this be extended to all the product tiles not on product page?

Maybe make the tiles in section 'find what you're looking for' bigger and reduce number

to 3 then add a shop all button or something like that.

The button 'take the 1-minute quiz' is too dark the font is not clearly visible.

Is there anyway to make the routine below bigger - maybe rectangular similar to the product tiles and use bigger images. Looks small on desktop. Same for the 'Find what you're looking for' and 'from the glow journal'

Also the change would make the page more uniform.

Could an image with a white background and some green element eg, woman holding product or product with palm leaves be used as the background for 'ready to start your glow journey' instead of solid green?

In custom skincare section the word favors

needs a 'u'

Product page

Will there be review rating stars below the product name when reviews are added?

Policies on product page doesn't show all the text.

The quick product guide can be removed because each area has its own heading

Is it possible to make the image size even with the product info so there isn't a big gap below the image? Or is that area for additional images?

Is there another format for the product page, everything in a tile looks a bit too crowded. Not sure the tiles format is the best fit, since the brand is emerging and we need to give

potential customers adequate information to make decisions also, we don't have a physical location for potential customers to interact with the brand so this is our main space for customers.

Checkout page

Could there be a note section in the checkout page?

Please remove the green background from the checkout, the contrast is poor with the dark fonts.

Contact page

Please remove the green background from the get contact page, maybe an image with green highlights could work...

Custom skincare favors need a 'u'

Remove green background here as well the

contrast with dark colour text doesn't work.

The contrast has to do with the accessibility aspect that's been introduced for websites recently.

Skin quiz page

Is there anyway to make the background more attractive since its just sitting in the middle of the page? Maybe add some skincare elements or image or so.

Could the next button be the gold colour for consistency?

Ingredients page -remove green background similar to other pages as above

Blog page - remove green background similar to other pages as above

About page

remove green background similar to other pages as above

I still have a concern with the header text just sitting in the center of the pages and not spread across, from left to right.

The ready to start your glow journey at the bottom of the About page is good, since its not fully green. Although it could be 1/3 green but it's ok.

Shop page

same with the green background

Can the product tiles be bigger?

Production

Updating the products is proving to be a bit challenging for me because the heading in the production area does not match what's

on the user end. Based on the message you sent that you will have it sorted. I edited a few more products today, namely; clear skin serum, clear Era Vanishing Cream, glow therapy soap, but the mismatch had me putting info in the wrong sections.

I kind of figured it out with the Clear Skin Serum but if you could match the production and user headings it would make it easier.

RESULTS - User end im unable to edit because I don't see which section it relates or links to so i added a section for it in about two of the products i edited. Problem is, its showing at the bottom on the user end. I will wait until you send confirmation that its updated before I try editing anymore.
